

Master Harvest Log

This google doc tab provides the template for the Master Harvest Log + a tutorial on how to add each year. This sheet houses ALL harvest data for all years and is the sheet that the web app pulls data from.

This sheet requires NO data entry + will only have to be adapted ONCE a YEAR. This sheet consists of one “Main” tab in which ALL the data from EACH harvest year lives. This tab is populated by concatenating each individual Harvest Log.

Each other tab is home to the data for THAT specific year. **When a new year begins, the farm manager will add a tab for that year in the Master Harvest Log** following the tutorial below. Aside from this, this sheet is meant to live behind the scenes and be left untouched as this is the sheet that the web app is pulling from.

As changes are made to the “live” year, these changes will be reflected + updated in the Master sheet automatically.

Year Tabs

- Format
 - Create a new tab/sheet and name it the Harvest Year
 - In A1 paste the following
`=IMPORTRANGE("GOOGLESHEET LINK","Harvest Record!A1:G")`
 - This will populate this tab in the Master sheet with the Harvest Record data from the individual sheets

Main Tab

****changes made on individual Harvest Log Year Sheets will be autoupdated in the Master sheet**

- Format
 - In A1 the following is pasted (**click on the formula to see more than first line!!**)
 - First Line
 - Defines column headers
 - Second line
 - Pulls all columns + observations from the 2024 tab (except notes)
 - Third line
 - Pulls all columns + observations from the 2025 tab (except notes)

```
={"Date","Vegetable","Quantity","Unit Price","Cost","Family";  
QUERY('2023'!A2:G,"select A,B,C,E,F,G where B<>'','0);  
QUERY('2024'!A2:G,"select A,B,C,E,F,G where B<>'','0);  
QUERY('2025'!A2:G,"select A,B,C,E,F,G where B<>'','0)}
```

- Adding a NEW year
 - Begin by adding a year tab using the instructions above
 - Go to main tab, cell A1 where the above screenshot is pasted
 - After the 2025 Query (**in between final soft + curly brace**) add a semi colon and paste the following
 - `QUERY('YEAR'!A2:G,"select A, B, C, E, F ,B where B<>'','0)`
- Year Column
 - This column is automatically filled and should stay greyed out
